Instructions 04/15

We are almost done with the semester. You have one more assignment (Homework 5) and a final project. The project will be due Friday May 1st. I plan on making the project available on Monday May 20. The project will be similar in structure to the mid-semester project.

To do List

1. Check solutions (`emissions_plot.m`) to the file input/output excercise from **Monday 04/03** lecture.

2. Finish Homework 4 if you have not already done so.

3. Start the last assignment, Homework 5. Homework 5 is short, you will put together the code implementing the various methods for numerical integration into one function to make it easy to compare the methods - see lecture from **Friday 04/03** for a refresher.
