

Programming Mathematics as an Advanced Math Course

Lisa Oberbroeckling

LOYOLA
UNIVERSITY MARYLAND

loerbro@loyola.edu

MAA Mathfest
Portland, OR

In 2002-2003, we realized our math/stat majors needed more:

In 2002-2003, we realized our math/stat majors needed more:

- programming experience

In 2002-2003, we realized our math/stat majors needed more:

- programming experience
- exposure to topics already seen

In 2002-2003, we realized our math/stat majors needed more:

- programming experience
- exposure to topics already seen
Examples: Numerical integration, Taylor polynomials

In 2002-2003, we realized our math/stat majors needed more:

- programming experience
- exposure to topics already seen
Examples: Numerical integration, Taylor polynomials

Also gave us the opportunity to expose students to additional topics.

In 2002-2003, we realized our math/stat majors needed more:

- programming experience
- exposure to topics already seen
Examples: Numerical integration, Taylor polynomials

Also gave us the opportunity to expose students to additional topics.
Examples: complex numbers, Fractals

Started in 2004 as a 1 credit course

Started in 2004 as a 1 credit course

In 2011 became 3 credits (50 minute classes in computer lab).

Started in 2004 as a 1 credit course

In 2011 became 3 credits (50 minute classes in computer lab).

Required of all math majors, elective for statistics majors

Started in 2004 as a 1 credit course

In 2011 became 3 credits (50 minute classes in computer lab).

Required of all math majors, elective for statistics majors

Ideally taken as one of their first upper levels (before analysis)

Started in 2004 as a 1 credit course

In 2011 became 3 credits (50 minute classes in computer lab).

Required of all math majors, elective for statistics majors

Ideally taken as one of their first upper levels (before analysis)

Is a pre-req for Numerical Analysis courses

MATLAB

MATLAB

M,W: discuss mathematics and/or MATLAB syntax

MATLAB

M,W: discuss mathematics and/or MATLAB syntax

F: lab day and/or quiz day

Prerequisite: Intro to CS course

Prerequisite: Intro to CS course

Co-requisite: Intro. to Linear Algebra

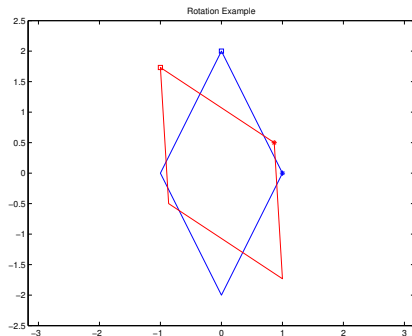

Prerequisite: Intro to CS course

Co-requisite: Intro. to Linear Algebra

| | |
|---------------------------------|-----|
| Quizzes (about every two weeks) | 30% |
| Assignments (about 10 total) | 40% |
| Final Project | 30% |

Final project: program(s), written report, and short presentation

Linear and Affine Transformations

Fern Fractals and Code Improvement

Fern 1 with n=5000 iterations
took 2.389344 seconds

Fern 2 with n=5000 iterations
took 0.899850 seconds

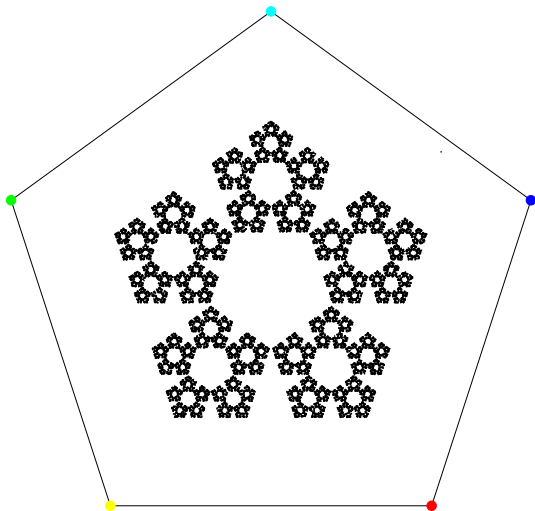

Fern 3 with n=5000 iterations
took 0.022540 seconds

Complex Numbers and the Chaos Game

Chaos Game for $n = 30000$. Time = 0.162389.

$n = 0$, 0.003208 s

$n = 1$, 0.003566 s

$n = 2$, 0.003675 s

$n = 3$, 0.003483 s

$n = 4$, 0.004863 s

$n = 5$, 0.011567 s

Students can choose from a list:

Students can choose from a list:

- Ciphers (substitution and columnar transposition)
- Game of Pig
- Volumes of revolution demo
- Linearization and Newton's Method

Or come up with their own:

- Game simulations
 - blackjack
 - LCR
 - baseball
 - hangman
 - Sudoku
- RSA Encryption
- Image reading and distortion
- Sorting algorithms
- Practice game of Set

- More interest from employers (internships and job offers)

- More interest from employers (internships and job offers)
- REUs and summer research

- More interest from employers (internships and job offers)
- REUs and summer research
- More programming in other courses

- More interest from employers (internships and job offers)
- REUs and summer research
- More programming in other courses
- Better appreciation/understanding of the mathematics

“Allowed us to use creativity”

“Skills can be used in the future”

“We completed a variety of projects which were relevant to the math knowledge I have”

“The graphs (especially for Riemann sums, fractals) actually furthered my understanding b/c I was able to visualize the concepts”
